

BIRDS & BATS UNLIMITED

Birds & Bats Unlimited

provide world-class environmental assessments and research. We have worked in seven countries on 64 projects (wind, solar, mining, rapid biodiversity surveys, and specialist studies).

Based in South Africa we have experience in Papua New Guinea, Germany, Namibia, Angola, Israel and Tristan da Cunha and are willing to re-locate for the duration of longer-term projects.

Using state-of-the-art GPS/GSM transmitters and the latest in bat technology to determine fine-scale habitat use, we are able to follow birds and bats in their use of space through high impact development sites.

These data assist us in mitigating risks by mediating between conservation concerns and development – thereby keeping environmental impacts to a minimum.

Let us help you achieve that.

Collaborations with botanical and rapid faunal specialists means we can provide a broad-spectrum service.

We believe in sustainable development and entrepreneurship, and will endeavour to find solutions without unduly compromising your needs.

As recognised BirdLife and SAIEES specialists we follow BARESG and Bat Surveys Good Practice Guidelines.

For queries, comments and quotes, please [contact](#) us.

Services

- Environmental Impact Assessments
- Bird and Bat identification, monitoring, observation and research
- Satellite tagging, mist-netting, ringing
- Intensive botanical surveys
- Rapid faunal surveys and data collection
- Bird and Bat census

Projects

Our projects include, but are not limited to...

- Wind energy
- Solar PV / CSP Towers / Trough technology
- Mining
- Pylon and power lines
- Golf course / Airstrips / Shooting range
- Oil spill management
- Game farms
- Water abstraction projects

Clients

- Savannah Environmental
- Globeleq
- Genesis Eco-Energy
- SubSolar / Environamics
- G7 Renewable Energies
- Synergistics Env Services SLR
- ERM
- Innowind
- Mulilo Renewable Energy
- Mainstream Renewable Power
- Electrawind
- EXM
- Kapama Private Game Reserve
